Good Sportsmanship is Worth More Than all the Fish in the Ocean NOVEMBER 2024

LARRC DINNER MEETING

LARRC WELCOMES DON KENT, M.S.

PRESIDENT AND CEO OF HUBBS SEAWORLD RESEARCH
INSTITUTE

The last dinner meeting of 2024 will be memorable. Don Kent has agreed to join us and will be updating the club regarding the activities of HSWRI as well as the program/s that have benefited from the donation our Foundation has made to them over the last three years. Additionally, Don will be sharing exciting news about the development of CEMA (Center of Excellence in Marine Aquaculture) in Carlsbad.

He has been with the Institute since 1977 when he was a graduate student at San Diego State University. We are grateful for his initiation of several programs that have resulted in the abundance of the white sea bass population in the last couple of years. He is an innovator with regard to advocating for the sustainability of marine life. It's a night you are not going to want to miss!

**Dinner Meeting
November 25, 2024
Social Hour 6:30pm**

Dinner and Meeting 7:00pm

Lulu's Restaurant • 16900 Roscoe Blvd. Van Nuys

What's On My Mind

By John Ballotti

This and That

Dues—Hopefully, you have returned your 2025 dues by now. If not, please do so as soon as possible. In a previous message, I indicated why dues are essential. That hasn't changed. The website, newsletter, insurance, storage, and supplies are recurring expenses that must be paid. As in past years, we hope to give back some of your dues as a lower Twilight charter cost. And, of course, the banquet on February 23, 2025, will have a reduced ticket price, highlighting the importance of dues.

Chum Line Special Edition—You should have received my email describing the Chum Line Special Edition celebrating our club's 75th anniversary. Here is your chance to pass on your congratulations to the club for achieving this remarkable milestone. Pricing for the messages is very affordable: \$50 for a quarter page, \$75 for a half page, and just \$100 for a full page. Proceeds from the ad sales will go directly to subsidizing the 2025 banquet, keeping the ticket price lower than ever before. Have some fun with the congratulatory message. Include a joke and a photo (a photo of you as a child is especially encouraged)., team up with other members, and send a combined message. Here is a perfect opportunity to express what the club means to you and our community. I hope you take this opportunity to show your support.

The Foundation Silent and Live Auction Needs Your Help—This is a familiar message for those who have been around the club for a long time. Taking underserved, special needs kids and disabled veterans fishing, along with marine biology scholarships and educational and research grants, requires funds generated at the annual Foundation fundraiser. Raising the funds is a two-step process. First, desirable merchandise and services must be available for members to bid on in the auctions. Second, members must step up and bid on the items. If you have items or services to donate, please do so now to reduce the last-minute stress and panic of not having enough to support the Foundation projects. At the event, participate by bidding on live and silent auction items. The retail cost of the merchandise and services will be discounted. You will get something of value that you can use at a fair price.

Happy Thanksgiving – From my family to yours, we wish you a happy, healthy Thanksgiving filled with joy and thankfulness.

CALENDAR

Board Meeting

CONSERVATION MATTERS

By Theresa Labriola ~ November 2024

Klamath River dam removal brings hope for threatened salmon

Over the last month, salmon have gathered in clear pools in the Salmon River as they have returned to their spawning grounds. This undammed river, a tributary of the Klamath River near the California-Oregon border, is one of the last remaining strongholds of a type of salmon that is increasingly at risk of extinction: spring-run Chinook. The salmon population here has sharply declined in the last decade. But the recent removal of four dams on the Klamath is bringing new hope among biologists, environmental activists and Indigenous leaders that the fish could begin to recover.

<https://www.latimes.com/environment/story/2024-10-04/klamath-river-dam-removal-brings-hope-for-threatened-salmon>

US bills would implement new protections for migratory birds

Two pieces of legislation introduced by U.S. Rep. Jared Huffman (D-California) and U.S. Rep. Brian Fitzpatrick (R-Pennsylvania) would strengthen conservation efforts around migratory birds and help protect them from commercial fishing operations. “Bucks and Montgomery Counties are home to hundreds of diverse species of birds and ecosystems,” Fitzpatrick said in a statement. “Many of these migratory birds are facing threats of extinction, and we must engage in initiatives to enhance standards for the conservation of these vital species. I am proud to join this bipartisan legislation to protect vulnerable species and improve habitat conditions.” The Albatross and Petrel Conservation Act would implement endangered seabird protections and the Migratory Bird Protection Act, would amend the Migratory Bird Treaty Act (MBTA) to clarify that the legislation’s ban on the unauthorized killing of migratory birds includes incidental take from commercial operations.

Bipartisan forage fish bill reintroduced to prevent further decline in US of herring, shad

The Forage Fish Conservation Act aims to prevent the further decline of populations of forage fish, including herring and shad. “Safeguarding fish stocks from

further decline is critical to protecting marine ecosystems and strengthening coastal economies” said co-sponsor US representative Debbie Dingell. “This legislation’s science-based conservation framework for forage fish will both help promote sustainable fisheries and preserve marine wildlife for the enjoyment of future generations.”

Walton Family Foundation: 80 percent of Americans care about sustainable seafood, food security, oceans

A new poll has found that most Americans care about sustainably produced seafood, food security, and protection of the world’s oceans. The poll found that more than four out of five Americans agree that it is important to promote the production of sustainable seafood.

“From Middle America to the coasts, choosing sustainable seafood that prioritizes ocean health will help foster healthy communities and a healthy planet,” WFF Environment Program Director Moira McDonald said. A total of 84 percent of adults surveyed said they believe it is important to “promote sustainable seafood and protect the health of fish in oceans” because 3 billion people worldwide rely on seafood as their primary source of protein. The poll also looked at reasons driving this concern for continued availability of seafood and ocean health more broadly. Large majorities said they believe in the importance of food security in America (85 percent), the health of the oceans (83 percent), and the ability of the oceans to provide fish and seafood (80 percent).

Next President Will Shape The Future Of America’s Largest Marine Monument

National monuments aren’t usually a partisan issue. Over the past two decades, the deputy superintendent of Papahānaumokuākea has worked under Republican and Democratic administrations. The Northwestern Hawaiian Islands have received layers of bipartisan protection for over a century. Worried about seabird poachers, President Theodore Roosevelt

sevelt established the Hawaiian Islands Bird Reservation in 1909, the first federal move to protect the area. President George W. Bush created Papahānaumokuākea Marine Monument in 2006. President Barack Obama nearly quadrupling its size in 2016, making it the world's largest protected place at the time. As an insurance policy, Democratic U.S. Sen. Brian Schatz of Hawaii and other backers of Papahānaumokuākea, including fellow Hawaii Rep. Ed Case, have been pushing forward a plan to designate the Northwestern Hawaiian Islands and the waters around them a national marine sanctuary, instead of just a monument. "I'm very much in favor of it because it is sort of a way to ensure that it is not subject to the whims of any individual president," Schatz said. Learn more about Papahānaumokuākea.

COP16 - Scientists call for urgent action over ocean acidification

World leaders gathered to discuss the current biodiversity crisis at COP16 in Colombia are being urged to turn greater attention to one of the largest - yet so far, particularly neglected - contributors to the eventual collapse of the marine environment: ocean acidification. Scientists have argued that despite its 'critical threat' to ocean ecosystems, awareness around the severity of ocean acidification and the role it's played (and continues to play) in worsening the catastrophic levels of biodiversity loss witnessed in the last century, remains 'woefully low'. Appealing to leaders of nations from around the world, scientists have highlighted that to date, only 13 out of 195 countries have developed national ocean acidification plans, suggesting that the "clock is now ticking" to curb a phenomenon that is "already unraveling marine life, food chains, and entire economies."

THE LONG AND SHORT OF IT!

By Marc Monforte

Over many a years, I have made various annual fishing trips, most of which are out of San Diego's Fisherman's Landing, with trip durations from 3 to 23 Days. As such, the trips vary in the time of year and the associated fish that are targeted. Traditionally, on my longest trips from December through May, the cow-sized Yellowfin Tuna and speedy Wahoo are the primary quarry. During the June and July period on 3 to 5-day trips, the Bluefin Tuna have been the fish of choice, most recently anyway. From August to November, on the 8 to 12-day trips, the pursuit changes to a much more diverse variety of fish. Although I enjoy embarking on each of these varied types of trips for various particular reasons, I have lately come to appreciate and favor the fall 8 to 12-days trips over the two others.

The lengthier of the long-range trips always provide the opportunity to battle with 200 pound plus Yellowfin Tuna and marauding Wahoo, which are as I mentioned two of the main targeted species. To experience this type of action involves just under 2000 miles of travel over 8 days, just to get there and back. And not to mention the additional miles covered moving from one fishing location and the next. On the various trips made to La Passion-Clipperton Atoll (Island), a small, French owned coral atoll (10 degrees from the equator) approximately 1550 miles south of San Diego, the total to and from travel increases to 12 days, covering about 3100 miles. That is an awful lot of water to transverse at about 10.5 knots.

I have experienced many a trip when the entire group of islands that incorporate the Revillagigedo Islands Archipelago (Clarion, Socorro, Roca Partida and San Benedicto) were open to sportfishing. The long travel time to reach the islands was tolerable due to the number of locations that we had the opportunity to put together a good and varied catch of fish. With the closing of the islands in the year 2000, my most recent 16-day trip in May of this year was

limited to fishing two locations, being the Shimada Seamount (Hurricane Bank) and Clarion Island, of which an environmental

buffer zone requirement greatly limits the fish-ability of that destination. Although those two primary locations are the focus of the longest trips, various fishing locations on the way south and then back north again (like Alijos Rocks and the Ridge Area), do provide a break in the long travel time, and/or an alternative location to fish if the lower area is particularly unproductive. Additionally, during a time that the big Bluefin Tuna are biting, an early departure from slow fishing to the Bluefin grounds up north has been another option.

As an example, during the May trip, we started fishing at Hurricane Bank, but shortly found that the location was un-fishable. Arriving to the bank in mid-afternoon, there was such a significant volume of sharks on the bank that we could not land a majority of the yellowfin tuna we hooked. Given that circumstance, when we make the move from Hurricane to our other fishing destination, Clarion Island (180 miles east of the bank), we usually leave around 12 noon, which facilitates an early morning arrival, and hopes

of a morning bite on the tuna. As such, prior to the final decision to move, we anchor up for the night on the bank to see what the next morning would bring. Additionally, it provides the opportunity to

catch flying fish, which makes for great kite fishing bait. That evening, the crew was successful in catching a couple hundred flyers, although the battle with the hundreds of sharks swimming with, and then around the boat at anchor made it challenging. As the captain, crew and many passengers commented, they have never seen such a volume of sharks on the bank before. However, I must admit that we were all enthralled with the sheer numbers of sharks, as well as being treated to an exciting show of shark verses flying fish. As the flyers would swim/fly to the side of the lighted boat, the sharks would explode on them just as fast.

At daybreak, we experienced the same relentlessness by the sharks on the few tuna we did hook, so looking for Wahoo was the next reasonable option. Although we were happy that the bank had plenty of Wahoo (Ono) on it, the aggressiveness of the sharks was so relentless that they were even eating the trolled fish before we could get them to the boat. When it came time to land a Wahoo on a bomb, jig or bait, it was an exercise in futility. Not a single Wahoo made it through. Our move to Clarion was now our only option.

In retrospect, I have personally observed during my annual trips down to both Hurricane and Clarion over the past 3 to 4 years particularly, that there has been an increasing volume of sharks each year. In looking back a few years ago, we routinely shared the bank with longline boats, there to catch sharks. Or, more precisely, "shark finning". The longliners would arrive at the bank a month or two prior to the Tuna Seiners, to cull the shark population. In doing so, the Seiners could minimize the number of sharks that would end up in their nets, thus minimizing costly/time-consuming repairs. I personally believe that the moratorium on shark fishing/finning that the Mexican Government put into law some years ago as a part of a global movement against the trade of shark fins has progressively/directly contributed to the present day, significant increase in the shark's biomass population.

With similar conditions we encountered upon arriving at Clarion Island, it was time to throw in the towel after three frustrating days trying to elude the persistent shark offensive. The only reprieve we found from the sharks was when we chased a few tuna schools at greater distances from the island. With both of our two primary fishing lo-

cation determined un-fishable due to the schools of sharks, the only option left was to start traveling north earlier than usual to fill in the remaining days of the trip. Stops along the Ridge Area, Alijos Rocks and finally in the Bluefin zone wrapped up the trip.

Moving into June, I was once again on the water, heading out to chase the Bluefin Tuna for 3 days. Al-

though I also enjoy making a couple annual short trips with my usual fishing buddies, my frustration with this duration trip is the higher probability of being caught in the "biting" and then "not biting" scenario. How many times have I been in the situation that I find myself saying, "if only we had another day or two of fishing", it would have made a big difference. As it would turn out on this trip, after three days of almost non-stop, around the clock traveling in search of the elusive and non-biting Bluefin Tuna, only nine tuna eventually came over the rail. And, true to form, the very next trip had a bonanza of a catch. Oh well....., That's Fishing.

That brings me to the most recent 10-Day Gallagher/Bob Sands trip that I was on in September. With a length of ten days, it was not too long nor too short, but just right! Considering the limitations and changes in the fishery overall on the longest of trips, and the apprehension of the shortest trips, I am becoming more of a fan for the 10 to 12 day, mid-range trips.

On this particular adventure, the 24 passengers and 8 crew members aboard the long-range sportfisher EXCEL headed to points south of San Diego's Fisherman's Landing in search of a variety of pelagic sportfish. After traveling just under two days and 420 miles, we were at our first destination, the most northerly offshore area along the Baja Peninsula, commonly referred to as the "The Ridge". The Ridge, northwest of Magdalena Bay is a long seamount running approximately 50 miles and has a number of high spots along its length that regularly holds and seasonally draws the large variety of fish we were looking for. The four primary high spot structures that we routinely visit on most trips, including this one, are the 13 Fathom Spot, Uncle Sam Bank, 23 Fathom Spot, and most southerly, the Thetis Bank.

With six full days of fishing to look forward to, our first

two days were spent at both the 13 Spot and Uncle Sam Bank. On day one, we looked for yellowtail and were successful in tagging 10 to 25 pounders. With most fish near the bottom, when not hooking Yellowtail, various other bottom fish were caught as well. Day two at the Uncle Sam brought us wide-open fishing and bringing aboard all the school size (25 to 80 pound) Yellowfin Tuna each angler wanted to work toward their 15 tuna limit. As it played out, from the first fish hooked to the last of 248 landed during that bite, the fish were only allowed a short reprieve from the anglers when the crew needed to empty the kill box and clear the deck. After the first fifty or so were caught, the Captain called a time out so that the crew could gill & gut the larger ones, get the whole batch down into the RSW (refrigerated saltwater) holds, and hose down the bloody deck. With that accomplished, the Skipper rang the bell for round two and the baited lines were back in the water once again. It did not take long for the kill box and deck to once again show the results of non-stop tuna action. Fifty or so fish more and the Skipper called for the second timeout. Ditto the emptying of the kill box and deck, fish into the hold, cleaned decks, and round three way underway. That scenario would occur three additional times until it was time to end the bite. It was not that the tuna shut off, it was just a matter of a few angles reaching their 15 fish limit, and most others holding off and leaving room for the larger grade tuna in days to come.

That opportunity would come the next day, after we made an overnight move out to Rocas Alijos, or more commonly referred to as just Alijos Rocks, which lies around 480 miles from San Diego and 190 from the Baja mainland. For those not familiar with Alijos, if you visualize a grouping of three primary volcanic islets that run along a submerged

ridgeline containing numerous other smaller islets/rocks, you are there. Starting with the largest islet of South Rock (about 100 foot high and 50-foot diameter) and moving to Middle Rock (about 60 foot by 30 foot) and ending with North Rock (75 foot by 40 foot) they are only separated by around 200 yards.

Although the larger Yellowfin in the 100-pound plus class were there, they just were not on the chew. We did see them and hooked just a handful, but they either won their freedom or became dinner for the annoying sharks. There were also smaller size tuna and Yellowtail to fill in the gaps, but the saving grace for the day was that the speedy Wahoo did want to battle. For the remaining afternoon, we landed 37 Whoos and then caught mackerel bait after dinner. After making bait, the skipper decided to make a short move to Alijos Bank, a high spot located about 12 miles southwest of the Rocks. That larger bait worked well in catching the bottom dwelling Yellowtail on the dropper loop. This is one of my favorite places for an opportunity to catch the "Mossback / Home Guard" Yellows. My largest, previously caught 66.7 pounder came from this location. After the sharks caught onto what we were up too, they moved in for their usual assault, and after bringing just heads over the rail; we called it for the night.

Staying overnight at the bank paid off dividends because the Wahoo wanted to battle once again, and the size was much larger than what we pick up at the Rocks. By the end of the late afternoon, we boated an additional 51 of the speedsters. Of those, I was lucky to bag four of them, weighing 48, 59, 64 and 72 pounds accordingly. There is nothing better than a monster Wahoo caught on a bomb!! Adding a mix of smaller yellowtail and a number of Stripped Marlin hooked and released, it was time for the boat to make another move.

After traveling east overnight about 160 miles, we arrived at the Thetis Bank to see what we could locate there. After a full day of varied fishing, we added Yellowtail, Yellowfin Tuna, Grouper, and a myriad of bottom fish to the fish holds. It was time for us to start heading north, so we made the next move to the 23 Fathom Spot, where we once again found similar fishing conditions and catch. As we continued our way up the line, just a few miles before

Dedicated to Fishing, Fun, Relaxation, and Companionship!

reaching the 13 Spot, we ran across a large kelp paddy that was holding hundreds of Dolphinfish, or commonly

known as Mahi-Mahi or Dorado. In addition to those names, they are also referred to as Do-Dos, due to their frenzied attack of anything that hits the water. True to their nickname, it only took one scoop of sardines over the rail to get them to crash the boat, and all those anglers who chose to land their limit of six fish, not to mention fishing for the galley, it was game on. Before pulling off the paddy, the crew placed a buoy on it to mark the spot, since another boat was on their way south, and would be passing by the next morning.

Once the Dorado chaos was over, we traveled the last few miles to once again reach the 13 Fathom Spot where we originally started. For those anglers who wanted to fill their limit with Yellowfin Tuna, they did so. We also made several drifts to specifically target the bottom fish, and they did not disappoint. In addition to the other various bottom fish that we caught at the other locations, we had onboard Grouper, Lingcod, Calico Bass, Sheephead, Whitefish, Reds, Spotback

Scorpion Fish, Sculpin, Amberjack, Cubera Snapper, Bonito and various other rock fish.

Leaving the 13 Spot, we started back to Fisherman's landing having experienced one of the benefits of taking a late season 10-Day trip, which made this particular trip so successful. The passengers and I were able to visit a number of fishing locations and caught a wide variety of fish species. I will continue to make the longer trips and shorter ones too, but taking in consideration of the Long and Short of it, the 10 and 12-day trips will be the ones I look forward to the most.

Members...

Here is Club President John Ballotti with some great shots from his recent trip to the East Coast.

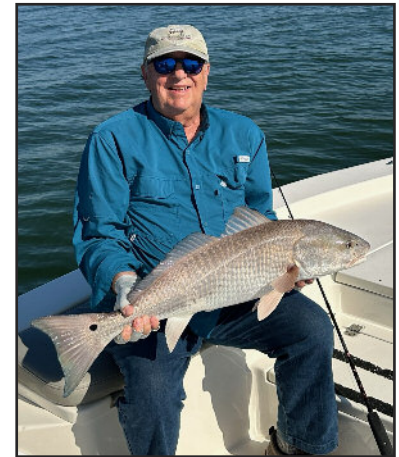

Lake Hartwell, South Carolina

South Carolina Soque River, Georgia

Soque River Clarksville, GA

Bull Redfish, Charleston Harbor

Veteran's Trip

October 17th was the last Veterans' Trip of the year aboard the Betty-O. Everyone had a great time and look forward to the trips next year.

Members...

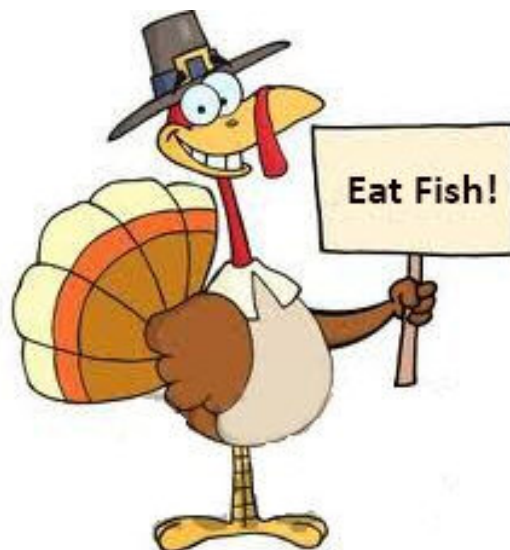

Sophia Huynh had a great time fishing in Punta Chivato, B.C.S. last month. She was fishing 15lb in the estuary and caught a few exotics, one off the boat closer to Conception Bay and a roosterfish off the beach!!! Her boyfriend, Kevin Boyle, caught a few corvina and other fish but didn't take pictures. So we aren't sure it really happened!
